PROXIMITY OPERATION NOT ALLOWED

Certain operators may not be nested in combination with other
 operators. A nested operator is valid only when it occurs at the same
 level or above the operator outside the nested phrase as determined by
 the following precedence list:

1. Numeric
2. (W), (NOTW), (A), (NOTA)
3. (S), (NOTS)
4. (P), (NOTP)
5. (L), (NOTL)
6. AND, NOT
7. OR

For example, '(MONOCLONAL(W)ANTIBOD?)(L)ANTIGEN?' is valid since (W) is above (L) on the precedence list. However, '((THIN(W)LAYER)(L)PHOSPHOLIPID#)(A)LACTONE#' is not valid since (L) is below (A) on the precedence list. The only exception is the 'OR' operator. This operator may be used in combination with any other operator. For example, '(ATOMIC OR NUCLEAR)(W)REACTOR' is valid.

AB The invention relates to the use of scaffold **proteins**, particularly green fluorescent **protein** (GFP), in **fusion** constructs with random and defined **peptides** and **peptide** libraries, to increase the cellular expression levels, decrease the cellular catabolism, increase the conformational **stability** relative to linear **peptides**, and to increase the steady state concentrations of the library **peptides** and **peptide** library members expressed in cells for the purpose of detecting the presence of the **peptides** and screening **peptide** libraries. **N-terminal**, **C-terminal**, dual **N-** and **C-terminal** and one or more internal **fusions** are all contemplated. Novel **fusions** utilizing self-binding **peptides** to create a conformationally **stabilized fusion** domain are also contemplated.

AB The present invention concerns compositions and methods involving mammalian polymerase kappa, an enzyme with limited fidelity and moderate processivity. Methods of modulating polymerase kappa activity, such as inhibiting or reducing its activity, as a means of effecting a cancer treatment or preventative agent are provided, both by itself and in combination with other anti-cancer therapies. Also described are methods of screening involving assaying for polymerase kappa activity or expression, in addition to methods of screening for modulators of polymerase kappa to identify anti-cancer compounds.
